

Joaquín González

Junior Full-Stack Developer

Santiago, Chile · +56 9 8537 2509 · joan.gonmir@gmail.com · waxopez.github.io · github.com/Waxopez · linkedin.com/in/joaquin-gonzalez-3836a5425

PROFILE

Full-stack developer with production experience. At Geodatos, a Chilean geophysical exploration consultancy with over 40 years in the market, I built and deployed the **corporate website** (React 19 + Vite, PHP 8.2 backend, Docker) during my internship, and was then **hired** to build the **internal intranet** end to end (Spring Boot + PostgreSQL + React 19). Focused on maintainable code, infrastructure and production deployment. I also trained and evaluated a recommendation model on data I collected myself. Graduated in Software Development (Duoc UC). Advanced English. **Available to start immediately.**

EXPERIENCE

Servicios Geológicos Geodatos SAIC Santiago, Chile · Jan 2026 – Jul 2026

Software Developer (hired after the internship) Mar 2026 – Jul 2026

- Designed and built the **internal intranet end to end** — **Spring Boot 3.5 (Java 17) + PostgreSQL 16** backend, **React 19** (Vite, Tailwind, React Query) frontend.
- Implemented authentication and **role-based access control (RBAC)**, plus modules for projects, HR, document management, email notifications and administration.
- Modeled the database with **Flyway migrations** and deployed to **production on DigitalOcean**, including domain and **DNS** configuration (NIC Chile and DigitalOcean).

Professional Internship — Web Development Jan 2026 – Mar 2026

- Designed, built and deployed the **corporate website (geodatos.cl)**: **React 19 + Vite** frontend (React Router, Tailwind, SEO) and a **PHP 8.2 backend** (Composer, PHPMailer).
- Containerized the app with **Docker** (Caddy + PHP-FPM) and applied **security hardening**: input validation, CSRF, rate limiting and antivirus (ClamAV) on uploads.

PROJECTS

- EventOut — capstone project (team of 3, developer)**: REST API in **Spring Boot (Java 21) + MySQL** with **JWT** and role-based access, **React 19** SPA (MVVM, Leaflet map) and a **Kotlin/Compose** Android app. Deployed on **AWS EC2 with Docker Compose** (multi-stage builds, nginx) with 26 automated tests.
- Competitive LoL draft engine — personal project, in real use**: **Python** scraper plus a **regularised logistic regression** model in TypeScript that predicts which draft wins, with *walk-forward* temporal validation and leakage controls. Evaluated on a 97-series holdout: exact-move accuracy went from **6.7% to 15.0%** over the previous version (log-loss, Brier, calibration).

SKILLS

Backend: Java, Spring Boot, Spring Security (JWT, RBAC), REST APIs, PHP

Databases: PostgreSQL, MySQL, Oracle SQL / PL-SQL, data modelling, Flyway migrations

Frontend: React, JavaScript, HTML5/CSS, Tailwind, Bootstrap

DevOps / Infra: Docker and Docker Compose, DigitalOcean, AWS EC2, nginx, DNS, production deployment

Tools & practices: Git/GitHub (branching, pull requests), Jira, Scrum, Vite, Swagger/OpenAPI

Testing & more: JUnit 5, Mockito, Vitest, Testing Library, Playwright, Python (Pandas, scraping), Kotlin/Android

EDUCATION

Software Development (Analista Programador) — Duoc UC 2024 – 2026 · Graduated July 2026

Final grade 6.3 / 7.0.

Computer Science Engineering — Universidad Autónoma 2021 – 2023 · partial

CERTIFICATIONS & LANGUAGES

Full-Stack Programming Certification — Duoc UC · 2026

CSFPC — Cyber Security Foundation Certification · 2025

Languages: Spanish (native) · English (advanced)

CAIPC — Artificial Intelligence Professional Certification · 2025

Python Essentials 1 — Cisco Networking Academy · 2024
